Matheson Collaborate

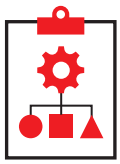
Introduction

The Matheson Digital Services Group is a new multi-disciplinary team comprised of lawyers, AI software developers, legal solutions consultants and architects, legal project managers, document automation specialists and business analysts to support our lawyers in the delivery of legal services. Matheson Collaborate is our secure digital workspace which we facilitate advanced matter management, secure file sharing, manage tasks, automate workflows and to provide flexible and real time access for our clients, their counsel, advisors and nominated third parties to relevant information on legal matters, all through a secure online workspace.

Secure File Sharing

Enhanced security protocols enable our clients to maintain control over confidential, sensitive and privileged documents. It allows our clients to collaborate on matter information and files securely and efficiently from anywhere in the world, from any device, at any time.

Our legal solutions consultants can quickly provide a secure online workspace giving our clients the ability to upload files and other data and share it instantly while maintaining full control over user access, reporting and auditing.



Advanced Matter Management

We design and implement bespoke task management features that help clients plan, organise, track and allocate tasks more efficiently. Key stakeholders are organised with tasks that can be assigned to individuals or groups, reviewed at a glance and adjusted in real time to keep up with the rapid pace of projects while also having clear sight of the bigger picture. This supports a lean agile approach to legal project management to plan for deadlines, set expectations and work within a predefined budget.

Virtual Dashboards

Using specialist data visualisation techniques, we create visual dashboards so our clients can view and access key information on a project or matter. This helps turn structured data into colourful, engaging charts and graphs, presenting complex information and key business metrics in a simple visual format.

Integrated AI and Automated Workflows

AI driven automated workflows create operational efficiencies that turn time consuming, repetitive tasks into intelligently automated processes which reduces the cost, effort and risk associated with manual work. This powerful feature has enabled our clients to automate and streamline legal service workflow, self-service document assembly, contract reviews, post-transaction reviews and many other processes.

Data Security

We understand that our clients' data is highly confidential, sensitive, and sometimes privileged which requires the highest level of data security standards. Our Digital Services team in conjunction with our Information Security team rigorously test and monitor Matheson Collaborate to ensure client data is secure and protected. All of our data centres are GDPR compliant and located within the EU.

Mobile and Responsive

Our deal management platform is a touch friendly, responsive design that enables our clients to securely access files and information from any device or location. Clients can easily view, download or comment on files from wherever their daily journey takes them.
