Virtual Data Room Services

Introduction

The Matheson Digital Services Group is a new multi-disciplinary team comprised of lawyers, AI software developers, legal solutions consultants and architects, legal project managers, document automation specialists and business analysts to support our lawyers in the delivery of legal services. The Digital Services Group provide an enterprise-grade virtual data room service that acts as a secure centralised platform where clients can easily manage transactions throughout the entire deal lifecycle. Our easy-to-use platform is used by our corporate, commercial real estate and financial services clients as a deal management platform to securely manage the exchange of files and other sensitive information with third parties in real time, across multiple devices from anywhere in the world.

Secure Document Exchange

Our deal management platform has sophisticated digital and document management controls that provides you with granular control over third party access permissions at folder, file and document level without the need for third party plug-ins. Experienced legal project managers in our Digital Services Group work with clients throughout the lifecycle of a project to tailor each site to the specific requirements.
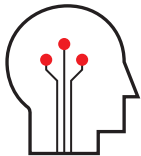

Reporting and Auditing

The platform contains comprehensive digital reporting and auditing capabilities that facilitate visibility providing an audit trail on user activity. On sell-side transactions, the Q&A bidder process can also be managed seamlessly online through the data room.

Data Insights and Visualisation

By harnessing the power of data visualisation techniques, we provide our clients with a visual dashboard which provides easy-to-read deal analysis at their fingertips enabling them to monitor deal activity in real time. Our intuitive dashboards help provide insight into key deal metrics during meetings.

AI-Powered Contract Analysis

We have integrated AI machine learning contract analysis and data visualisation technologies directly into Matheson Collaborate to speed up due diligence, contract analysis and lease abstraction exercises enabling you to take advantage of the cost savings afforded by cutting edge legal technologies without the need to engage third party vendors. Our specialist legal solutions consultants work with clients from start to end of each project to ensure all workflows are being handled in the most cost effective and agile manner possible.

Mobile and Responsive

Our deal management platform is a touch friendly, responsive design that enables our clients to securely access files and information from any device or location. Clients can easily view, download or comment on files from wherever their daily journey takes them.

Data Security

We understand that our clients data is highly confidential, sensitive, and sometimes privileged which requires the highest level of data security standards. Our Digital Services team in conjunction with our Information Security team rigorously test and monitor Matheson Collaborate to ensure client data is secure and protected. All of our data centres are GDPR compliant and located within the EU.
